

## II.2.1.2 Sulphiting

### Classification :

- Sulphur dioxide: additive
- Ammonium hydrogen sulphite: additive
- Potassium anhydrous sulphite: additive

### Definition :

Addition to crushed grapes or to must of gaseous sulphur dioxide, aqueous sulphur dioxide solution, or potassium disulphite[1], ammonium sulphite or ammonium disulphite.

### Objectives :

- Put into action:
  - An antiseptic against problems due to the growth of microorganisms,
  - An antioxidant,
  - A selective factor for yeasts,
  - A product facilitating settling,
  - A product favouring the extraction of anthocyanins.
- To regulate and control the fermentation.
- To produce preserved musts.

### Prescriptions :

- Sulphiting should take place during crushing or immediately after.
- Distribute the product evenly in the crushed grapes or the must.
- Ammonium sulphite and disulphite also introduce in the must ammonium ions that constitute growth activators for yeasts (see Activation of alcoholic fermentation).
- Products used shall comply with the prescriptions of the International Oenological Codex.

### Recommendation of OIV:

Admitted

---

[1] Potassium disulphite is synonymous with potassium metabisulphite
