

II.3.5.9 Carbon treatment of slightly coloured wine

Classification :

- Oenological carbon : processing aid

Definition :

Addition of carbon to wine.

Objectives :

Correction of the colour:

- Of white wines produced from red vine varieties with white juice,
- Of white wines accidentally discoloured by contact with containers that have held red wines,
- Of very yellow wines prepared from white varieties,
- Of oxidised wines.

Prescriptions :

- a) The processing shall not:
 - Serve to de-colour red wine or rosé,
 - Be applied successively to must and to the wine that results from it.
- b) The quantity of dry carbon used shall be less than 100 g/hl of wine.
- c) The carbon used shall comply with the prescriptions of the International Oenological Codex .

Recommendation of OIV:
