RESOLUTION OIV-OENO 614B-2020

TREATMENT OF WINES USING ADSORBENT STYRENE-DIVINYLBENZENE BEADS

THE GENERAL ASSEMBLY,

IN VIEW OF THE ARTICLE 2, paragraph 2 b) ii of the Agreement of 3 April 2001 establishing the International Organisation of Vine and Wine,

CONSIDERING the work of the "Technology" Expert Group,

DECIDES, following a proposal made by Commission II "Oenology", to introduce the following oenological practices and treatments into part II, Chapter 3 of the International Code of Oenological Practices:

Treatment of wines using adsorbent styrene-divinylbenzene beads

Part II

Chapter 3: Wines

Definition:

Physical process of reduction or elimination of organoleptic deviations characterised as "earthy-musty" by the appropriate and controlled percolation of wines at a high flow rate through adsorbent styrene-divinylbenzene beads.

Objectives:

a. To eliminate the perception of organoleptic deviations characterised as "earthy-musty" by the reduction in concentration or elimination of one of the main molecules responsible, geosmine.

Prescriptions:

a. Treatment should be carried out on clarified wines with turbidities of less than 30 NTU (nephelometric turbidity units);

b. the quantity of adsorbent beads to be used in the column and the wine flow rate are to be determined based on the initial geosmine content;

c. the adsorbent beads are placed in a column that is compliant with standards for food contact materials

d. the adsorbent beads implanted and the conditions of their use should comply with the prescriptions of the International Oenological Codex.

OIV recommendation:

Admitted.
